

Lipid Metabolism in Plants

This text presents a comprehensive description of the fundamental principles of plant lipid metabolism and then uses this base to examine current research in the field. The importance of molecular biology and the incorporation of new analytical methods are discussed, and the contributions of current research to agricultural and industrial uses are covered in depth. Chapters are illustrated with tables and figures to support key concepts, and projections for future research in the field are also explored.

LAWBOOK International Lawbook is an initiative of professionals with passion for a better society. It is dedicated to exposing, explaining and expounding law for the purpose of attaining Social Justice in the society. It is a platform where people meet, discuss, analyze and proffer solutions to common issues of mankind.
