

Medical Parasitology

This is a full colour book on human parasites, intended for postgraduates in medicine, biology and health sciences. Parasites are described within taxonomic groupings for easy reference: protozoa, helminths, and arthropods. Details are given for each on life cycles, epidemiology, distribution, clinical effects and treatment. The role of insects and others as vector is also covered, together with their control. The book also includes a systematic description of all scientific and clinical aspects of parasitic disease, including tropical disease.

that they play in causing human disease. For example, hundreds of millions of people suffer from malaria, and each year over one million human deaths are caused by this parasitic disease. **none** Parasites and Pathogenesis.
