

## Military Dermatology: 21st Century Military Medicine Textbooks from the Walter Reed Army Medical Center (CD-ROM)

This electronic book on CD-ROM provides a reproduction of a major military medical textbook, *Military Dermatology*. *Military Dermatology Textbook* - Places military dermatology in its historical context. Emphasizes and illustrates the conditions that specialists and general medical officers in the field are likely to see. Discusses diseases that are uncommon in the United States but prevalent worldwide in specific geographical locations. The Textbooks of Military Medicine are published by the Borden Institute of the Office of Surgeon General, AMEDD Center and School of the U.S. Army. The series constitutes a comprehensive, multivolume treatise on the art and science of military medicine, extensively illustrated, and written in an easy-to-follow narrative. The books integrate lessons learned in past wars with current principles and practices of military medicine. The spectrum of topics is broad, ranging from wound ballistics to medical ethics, and from considerations of harsh environments to applied biomedicine. The TMM series is tri-service in scope. In addition, other titles in the TMM series are included as a bonus on this disc: *Anesthesia and Perioperative Care of the Combat Casualty Textbook* - Describes and illustrates the entire spectrum of combat casualty care from initial wounding through anesthetic management to critical care in the intensive care unit. *Care of the Combat Amputee Textbook* - addresses all aspects of combat amputee care ranging from surgical techniques to long-term care, polytrauma and comorbidities such as traumatic brain injury and burns, pain management, psychological issues, physical and occupational therapy, VA benefits, prosthetics and adaptive technologies, sports and recreational opportunities, and return to duty and vocational rehabilitation. *Conventional Warfare Ballistic Blast Burn Injuries Textbook* - Addresses in detail

conventional weapons, their effects, and the treatment of the casualties that they generate. Reviews the historical significance of these injuries, and explains the basic scientific principles underlying the injuring mechanisms so that the medical officer will have an understanding of the injuries they must treat.

Emergency War Surgery Textbook - Drafted by subspecialty experts, it was then updated by surgeons returned from yearlong deployments in Iraq and Afghanistan. A collaborative effort of the Borden Institute and the AMEDD Center & School, this Handbook is an essential tool for the management of forward combat trauma. Medical Aspects Of Biological Warfare 2007 Version Textbook - Authors discuss biotoxins and explain methods for early identification for anthrax, plague, smallpox, alphaviruses, and staphylococcal enterotoxins. Case studies and research on successful management practices, treatments, and antidotes are also included.

Medical Aspects of Chemical And Biological Warfare (earlier combined version) Medical Aspects Of Chemical Warfare 2008 Textbook - a comprehensive source of the information available on chemical agents, this book will increase the level of preparedness and response capability of military and civilian practitioners responsible for chemical casualty care. Medical Aspects Of Harsh Environments Textbook (Two Volumes) - Describes and illustrates the medical conditions caused by heat and cold, mountain environments, high altitudes, and conditions below sea level. Includes researched information and illustrations on human adaptation to these harsh environments and the physical, cognitive, and psychological effects of exposure. Medical Consequences Of Nuclear Warfare Textbook - Addresses the increasingly important medical challenges of the consequences and management of radiation injuries.

LAWBOOK International Lawbook is an initiative of professionals with passion for a better society. It is dedicated to exposing, explaining and expounding law for the purpose of attaining Social Justice in the society. It is a platform where

people meet, discuss, analyze and proffer solutions to common issues of mankind.
