

Acute Leukemias: Pharmacokinetics and Management of Relapsed and Refractory Disease (Haematology and Blood Transfusion Hamatologie und Bluttransfusion) (v. 3)

Following the major breakthroughs in the and frequent and thorough exchange of treatment of acute leukemias in the seven information. Hence, it was felt that a series by the introduction of intensive combi series of symposia should be devoted to nation regimens, therapeutic progress has Pharmacokinetics and Management of slowed down and the impression of stagna Relapsed and Refractory Disease comple menting the established meetings on Prog tion may even have occurred. In contrast, the knowledge about the biology of leu nostic Factors and Treatment Strategies kemias is rapidly expanding and allows new which will proceed in parallel. It was the insights into the pathophysiology of the aim of the international symposium disease. Further improvements also come ACUTE LEUKEMIAS - Pharmacokine from a better understanding of the pharma tics and Management of Relapsed and cokinetics and pharmacodynamics of cyto Refractory Disease to provide an update static drugs and their mechanisms of action. of the present knowledge in this area and to Hence, novel treatment modalities can be stimulate further developments. As a sign developed on a more solid basis and ration for the closing distance between countries al. These achievements need to be comple and the development of effective world mented by effective eradication wide cooperation this symposium emerged of residual disease or its permanent control and new from the joint efforts of the German AML approaches have been derived from recent Cooperative Group and the M. D.

LAWBOOK International Lawbook is an initiative of professionals with passion for a better society. It is dedicated to exposing, explaining and expounding law for the purpose of attaining Social Justice in the society. It is a platform where people meet, discuss, analyze and proffer solutions to common issues of mankind.
